

**LISTING OF CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently amended) A battery having a complete discharge mechanism;  
said mechanism including a switch having a spring-biased element wherein said element acts to close said switch when said element is fully extended;  
said battery having two spaced blocks electrical components creating a passage;  
said passage aligned with said element and adapted to receive said element;  
a tab extended between said blocks, positioned between said element and said passage, said tab preventing said element from extending into said passage; and  
said tab extending through a casing of said battery;  
whereby pulling said tab allows said element to enter said passage and close said switch thereby activating said complete discharge mechanism.
